1. Purpose

This Standard Operating Procedure (SOP) establishes the standard agenda and review process for the weekly Key Performance Indicator (KPI) dashboard meetings conducted through Revify's ReviFlow billing KPI dashboard. The objective of the recurring review is to ensure transparency in financial performance, to proactively address billing bottlenecks before they impact cash flow, and to maintain alignment between Revify's revenue cycle management (RCM) operations and the client's clinical practice goals.

The SOP formalizes the conduct of the weekly meeting: pre-meeting preparation and data refresh, a fixed three-phase agenda covering operational vital signs, claims lifecycle, and financial summary, the capture of action items and decisions, and the escalation criteria that shift a routine review into a Correction Plan Meeting driven by dashboard-defined negative-variance triggers.

2. Scope

This procedure applies to the weekly KPI dashboard meetings between Revify's Revenue Cycle Analysts, Account Managers, Dashboard/Data Support, the Billing Operations Manager, and the Client's Practice Leadership across all clients served through ReviFlow. The procedure covers pre-meeting preparation, the three-phase meeting agenda, action-item capture and follow-up, escalation to a Correction Plan Meeting where triggered, and post-meeting recordkeeping.

This SOP does not replace payer-specific enrollment, credentialing, or trading-partner agreements administered under SOP-RCM-CRED-002 (ReviRollment). Where a client, payer, or regulator imposes a stricter rule than this SOP, the stricter rule shall prevail.

3. Definitions and Abbreviations

KPI (KEY PERFORMANCE INDICATOR)	A defined, formula-driven metric used in the ReviFlow dashboard to specific dimension of revenue cycle performance.
A/R (ACCOUNTS RECEIVABLE)	The aggregate outstanding balance owed to the practice for services and billed but not yet collected.
DAYS IN A/R	The average age, in days, of outstanding accounts receivable. Revify's target for the weekly review is twenty-five (25) days.
CLAIM REJECTION	A front-end, pre-adjudication determination that the claim cannot be into the payer's adjudication system, typically returned via the 277CA.
CLAIM DENIAL	A post-adjudication determination by the payer that the claim is not payable under coverage, coding, or medical necessity policies.
ALLOWED AMOUNT	The maximum amount the payer has agreed to reimburse for a calculated net of contractual adjustments.
CONTRACTUAL ADJUSTMENT	The difference between the billed amount and the allowed amount, representing agreed contract price reductions.

NET COLLECTION RATE	The percentage of allowed revenue that has actually been collected, calculated as collected ÷ allowed.
----------------------------	--

4. Roles and Responsibilities Matrix

Revenue Cycle Analysts

Confirm dashboard data refresh through close of previous business day; perform pre-call analysis on Days in A/R, copays, rejections, denials, and aging buckets; assemble pre-meeting materials 4 hours before the session; flag escalation triggers.

Account Managers

Own the weekly meeting end-to-end (scheduling, agenda, facilitation, minutes, action register, follow-up emails); define and document client administrative process changes; escalate Correction Plan Meetings.

Clients / Practice Leadership

Attend standing weekly reviews; review metrics' clinical and operational implications; commit to client-side actions (copay capture, card-on-file refreshes, clinical documentation adjustments).

Billing Operations Manager

Notify clients and Account Managers when agendas shift to a Correction Plan Meeting; govern trigger thresholds; authorize written exceptions; review root-cause reports.

Dashboard / Data Support

Maintain ReviFlow data ingestion, refresh schedules, and versioned field mappings; support Export CSV functions; validate data definitions.

5. Procedure

Governing Rule

The weekly KPI dashboard review shall proceed in the order presented in this section. No agenda phase shall be skipped, and no meeting shall be closed until all flagged exceptions are either resolved, assigned, escalated, or formally deferred with a documented owner and target date.

5.1 Pre-Meeting Preparation

- **5.1.1 Data Refresh:** The Revenue Cycle Analyst shall ensure that the ReviFlow dashboard reflects data through the close of the previous business day.
- **5.1.2 Pre-Call Analysis:** The Analyst shall identify trend lines in Days in A/R, copay collection rates, frontend rejections, post-adjudication denials, aging buckets (91-120 and 120+ days), and top 10 payer performance shifts (> ±5% week-over-week).
- **5.1.3 Carry-Forward Reconciliation:** Prepare a brief status summary of action items from the prior week's review (open, in progress, closed, or carried forward).

- **5.1.4 Pre-Materials Checklist:** Deliver the dashboard URL, current Export CSV download, prior-week minutes, and carry-forward lists to the Account Manager no later than four (4) hours before the meeting.
- **5.1.5 Exception Pre-Triage:** The Analyst shall flag any items meeting Section 7 escalation thresholds on the agenda before the session.

5.2 Meeting Cadence and Conduct

The meeting shall recur weekly on a fixed day and time per client. The default duration is thirty (30) minutes, expanding to sixty (60) minutes for Correction Plan sessions. The Account Manager shall capture minutes live while the dashboard view remains visible to anchor all commentary.

5.3 Agenda Phases

- **Phase 1 — Operational Vital Signs:** Review appointment volume, no-show rates (target $\leq 8\%$), eligibility run volumes, copay collection rates (target $\geq 90\%$), and Days in A/R (target ≤ 25 days).
- **Phase 2 — Claims Lifecycle & Performance:** Analyze frontend claim rejections (target $\leq 3\%$) and post-adjudication denials (target $\leq 5\%$). Map root causes and identify trends across the top 10 payers.
- **Phase 3 — Financial Summary & Outstanding Balances:** Evaluate total billed revenue, contractual adjustments, allowed amounts, net collection rate, and open outstanding aging balances split between payers and patients.

6. Meeting Output and Follow-Up

Minutes and Action Items

Every decision and item must include a description, named owner, due date, severity tier, and clear resolution completion criteria.

Record Keeping & Summary Email

The Account Manager shall distribute a summary email containing key insights, meeting minutes, and the exported CSV within twenty-four (24) hours of meeting close.

Carry-Forward Reconciliation

Items left open are moved to the next week's reconciliation list with updated target milestones.

Dashboard Refresh Validation

Dashboard Support validates that client-side changes (e.g., refreshed card-on-file data or backlogged eligibility runs) are successfully processed in the next refresh cycle.

7. Escalation Criteria

7.1 Trigger Thresholds

A routine review shall automatically convert into a formal Correction Plan Meeting when:

- Post-adjudication denial rates increase greater than 5% week-over-week,
OR
- 90+ day aging balances increase greater than 10% week-over-week.

7.2 Artifact Deliverables

If invoked, analysts must provide a detailed root-cause analysis report, localized claim types (payer, CPT, account numbers), and a defined milestone resolution timeline at least four (4) hours prior to the meeting.

7.3 Lift Criteria

Correction Plan rules remain in place until the trigger metrics revert below thresholds for two (2) consecutive weekly cycles.

8. Data Integrity and Reporting Standards

8.1 Source of Truth

ReviFlow data pulls directly from client Source EHR Data. No metrics shall be recalculated or re-derived outside of published calculation definitions during sessions.

8.2 Refresh Latency Disclosure

All presented metrics must be qualified with their refresh timing; stale data older than the previous close of business requires an explicit flag.

8.3 Privacy Controls

All dashboard data and CSV exports must maintain strict compliance with HIPAA Privacy and Security Rules.

8.4 Review-Cycle Closure Rule

No weekly KPI review cycle shall be considered complete until all flagged exceptions are either resolved, assigned, escalated, or formally deferred with a documented owner and target date. Metrics indicating negative variances must be routed for action within 24 hours of meeting close.

9. Documentation and Recordkeeping

All meeting minutes and escalation logs are permanently stored in secure repositories. Retention follows strict legal guidelines:

RECORD TYPE	MINIMUM RETENTION	REPOSITORY LOCATION
Meeting Minutes	7 Years	Central Master Repository
Dashboard CSV Exports	7 Years	Central Master Repository
Central Action Register	7 Years	Central Master Repository
Escalation Log & Root Cause Packages	7 Years	Central Master Repository

10. KPI Appendix

METRIC	DEFINITION	TARGET BASELINE	SOURCE
10.1 Appointment Volume	Total appointments booked in period	Client baseline (trend > -5% WoW)	Source EHR Data
10.2 No-Show Rate	No-shows divided by total bookings	≤ 8%	Source EHR Data
10.3 Eligibility Volume	Total eligibility runs executed	Active ≥ client baseline	ReVerify Portal
10.4 Copay Collected (\$)	Total copay dollars captured	Trending upward WoW	Source EHR Data
10.5 Copay Collection Rate	Copays collected ÷ copays expected	≥ 90%	Source EHR Data
10.6 Days in A/R	Average age of outstanding accounts	≤ 25 Days	Clearinghouse Engine
10.7 Claims Filed	Total claims submitted in period	Trend-stable per client	ReviClear EDI 837
10.8 Claims Rejected	Frontend clearinghouse rejections	≤ 3% of filed volume	ReviClear 277CA
10.9 Claims Denied	Post-adjudication payer denials	≤ 5% of filed volume	ReviClear 835 ERA

11. Reference Exhibit

Figure 1 — ReviFlow Dashboard Snapshot

Illustrative 30-day single-provider view (Dr. Dana Whitfield, 07/14/2026 to 08/12/2026). Captures Appointments (172), Eligibility runs (321), Copays collected (\$4,604 / 89.9% rate), Days in A/R (11.6 days vs 25-day target), Claims Filed (138), Rejections (0), and Denied dollars (\$2,078 at risk). Top Payers track via volume thresholds (BCBSTX, UHC, CMS Medicare, Aetna, Cigna, Texas Medicaid).
