REVIFY OPERATIONS • COMPLIANCE • STANDARD OPERATING PROCEDURE

Artificial Intelligence and PHI Usage Policy

Governance framework for the use of AI, generative AI, automation, machine learning, transcription, and analytics technologies.

DOCUMENT ID	SOP-RF-GOV-006
EFFECTIVE DATE	Upon formal approval by the Authorized Approver
VERSION	1.0
DEPARTMENT	Revify Operations
PRODUCT/PROCESS	Artificial Intelligence and PHI Usage Policy
OWNER	Saravanan Kumar Operations Manager
CLASSIFICATION	Controlled Internal - Client-Shareable (as approved)

This document is the controlled master copy of SOP-RF-GOV-006. Uncontrolled if printed.

Document Control

DOCUMENT TITLE	Standard Operating Procedure: Artificial Intelligence and PHI Usage Policy
DOCUMENT ID	SOP-RF-GOV-006
PRODUCT	Artificial Intelligence, Generative AI, & Machine-Learning Systems
DEPARTMENT	Revify Operations
CLIENT/OWNER	Revify Operations Compliance Oversight
APPLIES TO	All Revify / Reviflow workforce members and contract personnel
EFFECTIVE DATE	Upon formal approval by the Authorized Approver
VERSION	1.0
PREPARED BY	Governance Library Draft Team
REVIEWED BY	Keri Figueroa - Interim Compliance Oversight
APPROVED BY	Authorized Approver/ Executive Leadership
DOCUMENT OWNER	Revify Operations
REVIEW CYCLE	Annual (minimum) or upon material change
CLASSIFICATION	Controlled Internal - Client-Shareable (as approved)
RELATED DOCUMENTS	SOP-RF-GOV-001 through SOP-RF-GOV-005, SOP-RF-GOV-007

1. Purpose

This Standard Operating Procedure (SOP) establishes the governance control framework governing Revify's and Reviflow's use of artificial intelligence, generative AI, automation, machine-learning (ML), transcription, analytics, and related computational technologies. The SOP exists to ensure that no workforce member or contractor introduces Protected Health Information (PHI) into an AI system, model, or service that has not been formally reviewed and approved through Revify's vendor, privacy, security, contractual, and compliance review process.

2. Scope

This SOP applies to all Revify and Reviflow workforce members, including full-time, part-time, temporary, and contract personnel, regardless of role or geographic location. It applies regardless of where AI processing occurs-Revify-hosted infrastructure, vendor-hosted infrastructure, bring-your-own-device usage of consumer AI services, or ad-hoc use of public AI tools.

Out of scope: General-purpose word-processing, spreadsheet, and presentation software that does not include AI-driven features processing Revify data.

3. Definitions and Abbreviations

AI SYSTEM	Any software, model, service, or feature that performs inference, generation, classification, or automated reasoning using artificial-intelligence or machine-learning techniques.
GENERATIVE AI	An AI system whose primary function is to produce new content (text, images, audio, code, structured data) in response to a prompt or input.
LLM	A large language model-typically a generative AI model trained on broad text corpora and accessed via API , web UI, or hosted deployment.
PHI	Protected Health Information-individually identifiable health information held or transmitted by Revify on behalf of a covered entity or business associate under HIPAA.
DE-IDENTIFIED DATA	Information from which all HIPAA-specified identifiers have been removed or transformed in accordance with 45 CFR §164.514(b).
SYNTHETIC DATA	Artificially generated data created by an AI system or rule-based process used in place of

	real data for development or testing.
APPROVED USE	A documented use case for an AI system that has completed Revify's comprehensive review process and is recorded in the AI Register.
AI REGISTER	Revify's authoritative inventory of all AI systems in scope of this SOP.
MATERIAL OUTPUT	Any AI output that will be acted upon, relied upon, or communicated externally in support of an operational, billing, credentialing, coverage, or patient-financial decision.

4. Roles and Responsibilities Matrix

Principal responsibilities are designated as: R = Responsible, A = Accountable, C = Consulted, I = Informed.

ROLE/ FUNCTION	R	A	C	
Document Owner-Revify Operations	Coordinates reviews	End-to-end SOP	Compliance Oversight	Workforce/ Clients
Compliance Oversight	Advises on privacy	Privacy aspects	Document Owner/ Legal	Executive Leadership
Information Security	Security reviews	Technical risk	Document Owner/ Compliance	Workforce
Legal/ Contracts	Drafts agreements/BAA s	Contractual risk	Compliance/ Security	Document Owner
Procurement	Onboarding paperwork	Lifecycles	Security/ Legal	Document Owner
Business Unit Leader (Tool Owner)	Defines purpose/scope	Unit AI usage	Document Owner/ Compliance	Assigned Team
Workforce Member	Daily compliance	Individual AI use	Manager/ Compliance	Ops (via incident log)
Internal Audit	Tests controls	Reports compliance	Document Owner	Executive Leadership

5. Procedure

5.1 AI Tool Lifecycle Management

5.1.1 Intake and Use-Case Definition

The requesting Business Unit Leader submits an AI Intake Request covering business purpose, intended users, data classes, expected volume, and termination criteria. The Document Owner triages the intake within two (2) business days.

5.1.2 Privacy and Compliance Review

Compliance Oversight confirms whether the proposed use involves PHI and, if so, whether the use case can be reduced to non-PHI or de-identified data. Contractual posture (BAA, DPA, subprocessor constraints) is verified.

5.1.3 Vendor and Security Review

Information Security completes the Vendor Review Checklist, auditing encryption, access controls, logging, retention, and incident reporting commitments. Legal finalizes clauses ensuring no model training on Revify data occurs.

5.1.4 Approval and Registration

Approval is granted by Compliance Oversight with concurrence from InfoSec and Legal. The Document Owner records the system in the AI Register before it goes live.

5.1.5 Onboarding and Access

Approved users are provisioned with the minimum data classes permitted. Logging, audit, and data-loss-prevention (DLP) controls are enabled before access.

5.1.6 Monitoring and Periodic Review

Each AI Register entry is reviewed at least annually. The Document Owner reports register health and exceptions to Compliance Oversight monthly.

5.1.7 Change Management and Decommissioning

Any material change triggers a new review cycle. Decommissioning requires access removal, certified data deletion/return, and register updates.

5.2 Human Oversight and Output Validation

AI output is presumed non-authoritative. No AI system shall automatically or independently make a final billing, credentialing, coverage determination, patient eligibility decision, or patient financial responsibility determination.

Material operational output produced by AI shall be reviewed by an appropriately qualified human before being acted upon or communicated externally.

Workforce members shall perform a verification step calibrated to output risk, including spot-checking source documents and reconciling totals. Disagreements are always resolved in favor of the underlying source data.

Material AI decisions shall record the human reviewer, time of review, and the disposition (confirmed, modified, rejected) in the same record as the AI output.

6. Outputs and Follow-Up

AI Register Entries

Authoritative inventory records tracking active tools, owners, classifications, and next review dates.

AI Vendor Review Checklists

Security and privacy due diligence records filed for each authorized tool.

Human Oversight Annotations

Log entries capturing manual human review validation on all material AI outputs.

7. Escalation Criteria

7.1 Exceptions

Deviations from this SOP require a written, time-bound Exception Request approved by Compliance Oversight. Exception windows shall not exceed ninety (90) days without an approved extension.

7.2 Suspected PHI Exposure or AI Misuse

Workforce members who suspect that PHI has been submitted to an unapproved AI system shall notify Compliance Oversight immediately and within no more than one (1) hour of discovery. Compliance Oversight will follow the response procedures in SOP-RF-GOV-003.

7.3 Vendor Incident

Vendor-reported incidents impacting Revify data shall be processed under SOP-RF-GOV-003 and documented in the AI Register against the affected entry.

7.4 Disciplinary Consequences

Failure to comply with this SOP may result in disciplinary action up to and including termination of employment or contract.

8. Standards and Controls

8.1 Core PHI Prohibition Rule

No workforce member may enter, paste, upload, transmit, or otherwise submit PHI to any AI system unless that system and specific use case has been formally recorded as an Approved Use in the AI Register.

8.2 Prohibited AI Practices

Using PHI in an unapproved AI system, or using AI output as the sole basis for material determinations without documented human review, is strictly prohibited.

8.3 Data Classification and Minimization

Users must default to the most restrictive classification when uncertain. Prompts must be minimally constructed, and de-identified data used whenever possible.

8.4 Logging, Audit, and Monitoring

All production-relevant AI interactions must be logged (user, timestamp, system, prompt/response class) and protected at the same tier as the underlying data.

9. Documentation and Recordkeeping

The following records are produced under this SOP and shall be retained in secure repositories according to this schedule:

RECORD TYPE	RECORD OWNER	MINIMUM RETENTION
Approved AI Register entries (current and historical)	Document Owner	Life of tool + 6 years
AI Vendor Review Checklists and supporting evidence	Information Security	Life of contract + 6 years
Executed vendor agreements (BAA, DPA, MSA Order Forms)	Legal / Procurement	Life of contract + 6 years
Approved Use intake requests and approvals	Document Owner	6 years from closure
Human oversight annotations for material AI output	Business Unit Leader	6 years from decision
Monitoring and exception reports	Compliance Oversight	6 years from report date
Decommissioning evidence (deletion/return attestations)	Information Security	6 years from decommission

10. Appendix / Exhibits

Control Effectiveness Metrics {KPI Appendix}

KPI	DEFINITION	TARGET
AI Register Currency	% of in-use AI systems recorded in the Register within the required window	100%
Vendor Review Currency	% of Register entries with a current vendor review on file	>= 98%

PHI Exposure Events	Number of confirmed or suspected PHI submissions to unapproved AI per quarter	0 (zero)
Exception Aging	% of approved exceptions within their approved time bound	100%
Human-Oversight Coverage	% of material AI decisions with documented human review	>= 99%
DLP Coverage on AI Endpoints	% of approved AI endpoints with DLP policies	100%
Decommissioning Timeliness	% of decommissioned systems closed in the Register within 30 days	>= 95%

11. Approval and Signatures
